

CLE270 - MISSING NDBS

Hello all

Here are our lists for the 385 – 399.9 kHz range showing NDBs that were missing from the CLE272 logs and which may now be closed down. The entries were selected based mainly on when the NDBs were **Last Logged** and the total number of **Logs** that have included them.

We again thank Don for searching the NOTAMs, etc. for us, to confirm and explain their apparent disappearance where possible. As always, for many of them there was no clear information to be found.

Don's findings are in the final **Status** column.

The lists are sorted in descending order of the number of logs, the most heard ones first.

There are seldom enough reception reports to recognise missing NDBs away from Europe and North America.

No info means unable to find any positive information to determine whether the NDB is decommissioned, withdrawn, awaiting repair or is still actually active.

Decom / Deleted = Decommissioned

OTS = Out of Service

u/s = Unserviceable

..est estimated dates

apt = airport

listed means the NDB is still listed as part of the airport's navigation systems.

on charts means the NDB is still being shown on current airport or approach charts.

We welcome any reports - to NDB List please - with details of new closures of your local NDBs.

This is inevitably not an exact science unless there have been recent loggings. NDBs often close without any formal confirmation and where there is a NOTAM, after a while it is removed. Also some NDBs, such as many of the offshore beacons, remain potentially active but may only re-appear for short periods after months or years.
