	Averages (all listeners):	302	16030	46	977

Av. km = Average distance from listener to NDB for all their loggings
Total km = Sum of distances from listener to NDBs for all their loggings
NDBs = Number of NDBs logged
Max km = Maximum distance from listener to an NDB logged

Each listener's individual results depend, of course, on many things. Most important are location and equipment (receiver, aerial, etc.) and the time available for listening.

It is interesting to see that, in general, listeners who live near the sea tended to have considerably higher average distances to the NDBs they could hear and higher maximum distances to any NDB logged.
