USA	WA	de	Dan Petersen, La Center, near Longview in SW of WA

For full details, please see the individual reporters' logs,
as previously posted by them to the List.

If you spot an omission or problem in your own details below
please let me know (ndbcle'at'gmail.com
- replace the 'at' by an '@' symbol)

**(Tony mis-read the CLE start time as midday on Friday 24th.
He wanted to withdraw his log, but I thought it would be a
real shame to lose all the work of making a big pyramid and I
asked him to let it stay. It was not possible to build a minimal
pyramid with the remaining 'legal' loggings.
His results below are shown in italics.)*

PYRAMIDS SUMMARY:

This table summarises each listener's results - aerial height, pyramid size and the radio countries at each level.

E.g. Tom's column ('to') shows that 4 NDBs in Kansas were logged at level 4 in his size 17 pyramid.

The aerial height (countries with one NDB logged) should be the same as the pyramid base size, where possible.

The gaps in the table are where the program did not find that number of loggings for a radio country.

This may have arisen where a listener showed two loggings of the same NDB,

or where a listener had allocated an NDB to the wrong radio country, etc.
 The 'missing' country may then share the same count as the country above or below it.

**Aerial Height
Pyramid Size**

LISTENING DAYS & TIMES

After the 10 day long CLE, this special table may be of interest.
It shows the number of NDBs logged by each listener on the days and times shown.
(E.g. 25 18 is December 25th, 18:00 - 18:59)

Any extra high figures probably arise from the later analysis of recordings.

BEACONS HEARD:

Beacons are shown in kHz order within each Country and State/Province

Hold tight - there are 1,587 of them!

Any UNIDs and Offshore NDBs appear at the end of the list.
The numbers shown within the table are the times in 'hh' UTC that the beacons were logged.
(e.g. 13 indicates logged between 13:00-13:59 UTC)

Av. km = Average distance from listener to NDB for all their loggings
Total km = Sum of distances from listener to NDBs for all their loggings
NDBs = Number of NDBs logged
Max km = Maximum distance from listener to an NDB logged

Explanation:

We ENJOY Listening Events, but their real value is to encourage us to improve our knowledge of our hobby, our listening techniques, our receivers and aerials, etc. Many of our CLEs re-use the same listening 'rules' after a year or so. This can provide each of us with an excellent way of measuring our personal progress by comparing our results THEN with our corresponding results NOW.

**The lower table shows statistics for listeners who took part in both the events.
The bottom lines compare the general conditions found during the two events.**

Each listener's own results also depend, of course, on many other things, such as changes in receivers or aerials, time available for listening, use of recording equipment and maybe a move of QTH, as well as progress made through listening practice.

Comparing the results between individual listeners is not very meaningful - we each have so many unavoidable things that affect our ability to hear NDBs; where we and they happen to be, whether we are in a city or in wide open spaces or by the sea, our spending limit, how long we are able to devote to listening, etc.

'TAB's Trans-Atlantic Beacons

The numbers shown within the table are the times in 'hh' UTC that the beacons were logged.
