

## CLE202 - REMOTE LISTENING EVENT 1 - 4 January 2016

Here are some further results for the listeners who enjoyed using the eight remote receivers in last weekend's CLE. I have now made some extra calculations, including distances from the NDBs logged to the Receiver sites used.

That showed a few further errors (NDB ident mis-heard, etc.), Those are now corrected in the following and the affected listeners are being advised. There are some small differences in some of the statistics for those and other reasons.

I do apologise for the poor presentation of the following.

15 Reporters  
608 reports supplied  
Max of 10 NDBs logged per listener per receiver.

(If I don't have an accurate Lat./Long. for some of the receivers, the distances above may be a few km in error. Also, a few NDB locations are not known with high accuracy.)
