

I think listeners shown on the charts towards the upper left can be congratulated for getting extra loggings in the time available (whether or not with SDRs), and listeners towards the lower right can be congratulated for their perseverance.

Coming CLEs

One listener commented that CLE213 *“Relaxes me before the strains of the fiendish Christmas/New Year challenges that we anticipate.”*

CLE214 This will be our Christmas – New Year Special. Fiendish? – maybe! Probably 25 December – 2 January. As usual, it will be something that can be enjoyed in a few short sessions, but also it will tempt you to keep going, even if you have all the time in the World! Please look out for the Early Advice the weekend before Christmas.

CLE215 27 – 30 January - Just a ‘ normal ‘ one.

Good listening

Brian

(CLE Coordinator)

CLE213:

EUROPE

NIGHT	NDBs	Exp.	+/-
Friday	453	498	-45
Saturday	243	249	-6
Sunday	176	125	51
Totals:	872	872	

NORTH AMERICA

NIGHT	NDBs	Exp.	+/-
Friday	420	373	47
Saturday	204	187	17
Sunday	29	93	-64
Totals:	653	653	

The 'NDBs' column shows how many NDBs were heard on each night and the total.

The 'Exp.' column shows how many NDBs would normally be expected on each night for that same total (each night about half as many as on the previous one as there are fewer 'new' ones still remaining to be heard)

The '+/-' column shows how many more, or less, were heard each night than expected.

The results show slightly worse conditions in Europe on night 1, slightly better on night 3. By contrast, North America seemed slightly better on night 1, slightly worse on night 3.

(Night-to-night changes could also be due to a special event - a celebration, etc. - that had affected several of us)
