

# CLE254 - MISSING NDBS

Hello all

Here are our lists for the 400-420 kHz range, made from the NDBs that were missing from the CLE254 logs and which may now be closed own. The entries were selected based mainly on when the NDBs were **Last Logged** and their total number of reported Loggings (**Logs**).

Our thanks to Don who has again searched the NOTAMs etc. for us, to confirm and explain their apparent disappearance where possible. His findings are in the final **STATUS** column. The lists are sorted in descending order of the number of logs, 'most heard' first. There are seldom enough reception reports to recognise missing NDBs away from Europe and North America.

**No info** means unable to find any positive information to determine whether the NDB is decommissioned, withdrawn, awaiting repair or still actually active.

**Decom / Deleted** = Decommissioned

**OTS** = Out of Service

**u/s** = Unserviceable

**..est** estimated dates.

**apt** = airport

**listed** means the NDB is still listed as part of the airport's navigation systems.

**on charts** means the NDB is still being shown on current airport or approach charts.

We welcome any reports to NDB List with details of closures of your local NDBs.

This is inevitably not an exact science unless there have been recent loggings. NDBs often close without any formal confirmation and where there is a NOTAM, after a while it is removed. Also some NDBs, such as many of the European offshore beacons, remain potentially active but may only re-appear for short periods after months or years.
