

CLE259 - MISSING NDBS

Hello all

Here are our lists for the 240-320 kHz range showing NDBs that were missing from the CLE259 logs and which may now be closed down. The entries were selected based mainly on when the NDBs were **Last Logged** and their total number of reported Loggings (**Logs**).

Thanks Don, for searching the NOTAMs, etc. for us, to confirm and explain their apparent disappearance where possible. Don's findings are in the final **STATUS** column.

The lists are sorted in descending order of the number of logs, 'most heard' first.

There are seldom enough reception reports to recognise missing NDBs away from Europe and North America.

No info means unable to find any positive information to determine whether the NDB is decommissioned, withdrawn, awaiting repair or still actually active.

Decom / Deleted = Decommissioned

OTS = Out of Service

u/s = Unserviceable

..est estimated dates

apt = airport

listed means the NDB is still listed as part of the airport's navigation systems.

on charts means the NDB is still being shown on current airport or approach charts.

We welcome any reports - to NDB List please - with details of closures of your local NDBs.

This is inevitably not an exact science unless there have been recent loggings. NDBs often close without any formal confirmation and where there is a NOTAM, after a while it is removed. Also some NDBs, such as many of the European offshore beacons, remain potentially active but may only re-appear for short periods after months or years.
