

WORLD DGPS DATABASE FOR DXERS

(SORTED BY FREQUENCY ORDER)

Version 13.2

Last updated: 20th of December 2022

Compiled by Alan Gale, G4TMV

NOTES:

- #1: Some countries transmit the TX ID Number; others transmit the Reference Station Number!
- #2: The Country Identifiers used in this list are taken from the NDB List Country Code List, which is available from the NDB List website: <https://www.ndblist.info/ndbinfo/countrylist.pdf>
- #3: This list is aimed only at radio enthusiasts, and it goes without saying that it should not be used for navigational purposes since the data cannot be confirmed as being 100% accurate and up to date. Any updates or corrections would be much appreciated.
- #4: In this edition the column marked 'TX ID' shows the number that is used when submitting logs to the RNA/REU/RWW Online Database. Please note that even though some stations will be transmitting just the **REFERENCE ID** number, it is still the TX ID which should be used for logs that are to be included in the RNA/REU/RWW database, which can be found at: <https://rx.classaxe.com/en/reu/signals>
- #5: From edition 2.2 onwards the actual Transmitted ID or REF ID number is shown in **BOLD** lettering where known. More of these will be marked as and when they are confirmed as accurate by on-air monitoring. Any additional confirmations that users can send me would be greatly appreciated.
- #6: TX ID: = Prefaced by the # symbol. This refers to the Broadcast Transmitter ID Station Number allocated to the Beacon
- #7: REF ID: = Prefaced by the (symbol. This indicates the Reference Station ID Number allocated to the Beacon
- #8: BPS: = Indicates the Bits Per Second [the rate the signal is transmitted at] of the beacon
- #9: TX ID: = This also refers to the Numbers used in the **RNA-REU-RWW Online Database**
- #10: Message Type: = This refers to the type of message broadcast by the station. This will help to confirm that you are receiving the correct beacon, and not a "phantom" decode produced by the decoder

There is now a specialist group called the 'DGPS List' which covers this mode, to find out more visit: <https://groups.io/g/dgpslist/>

Updates for this list can be sent to: **<dgpsupdates at ndblist.info>** (replace the 'at' with @) © A. Gale/DGPS List 2022

DGPS BEACONS OF THE WORLD - SORTED BY FREQUENCY:

- NOTE: #1** - The actual Transmitted ID [**TX ID**] or **REF ID** numbers are indicated in **BOLD**. More will be marked as and when they are confirmed as being accurate.
- NOTE: #2** - **nya** = frequency not yet assigned to this beacon.
- NOTE: #3** - **TX IDs** are prefaced with a `#` symbol e.g. #123 – this symbol does not appear on decodes, it is used purely to indicate that this number is the **TX ID**.
- NOTE: #4** - **REF IDs** are prefaced with a `(` symbol e.g. (123 – this symbol does not appear on decodes, it is used purely to indicate that this number is the **REF ID**.
- NOTE: #5** - Many of the **UNIDENTIFIED** beacons shown are likely to be connected with the Russian inland waterways, but no `official` information is known about their identity as yet.
- NOTE: #6** - It is not known if the Russian beacons are transmitting **TX ID** or **REF ID**, so these are currently shown as **TX ID** to aid the REU-RNA-RWW Logging Database system.
- NOTE: #7** - **Latitude** and **Longitude** are shown in `Degrees and Decimal Minute` format.
- NOTE: #8** - In Region One the Bandplan is 283.5 to 315.0 kHz with 0.5 kHz channel spacing, In Regions Two and Three this is 285.0 kHz to 325.0 kHz.

CREDITS & SOURCES:

NOTE# It goes without saying that this database is provided only for the use of hobbyists and should not be used for navigational purposes. No claims are made about this being an accurate and completely up to date list, since even many of the "official" lists seem to have problems in obtaining information about some of the beacons. It should therefore only be considered as an attempt to create a workable list for DGPS enthusiasts and Beacon DXers to use. As always, any updates and corrections are greatly welcomed, especially 'Message Type' information, and actual transmitted ID information, and in particular, any information at all about the 'UNIDENTIFIED' beacons, 'Type 3' messages are especially helpful, as these often contain the Latitude and Longitude of the transmitter site.

Most of the material in this database came from the following sources, my thanks to all of them, and my sincere apologies to anyone I accidentally left out (do let me know if you are not here and think you should be!):
